Main difference between microcontrollers and PLC Programmable Logic Controllers (PLCs) and Microcontrollers ( $\mu$ Cs), what difference and what can orientate the choice of one instead of another? Thanks

### **Main difference between microcontrollers and PLC**

PLC is a special microcontroller designed for industrial application. It is for controlling machinery or processes. A microcontroller is a microprocessor that can be used for any type of application. The basic difference between PLC and microcontrollers is only the way of programming. Most common way of

Why use PLC instead of microcontroller? Ask Question 47. 15 \(\$\begingroup\)\$ Why does everyone use PLCs in industrial environments, instead of a microcontroller based solution? For a longer task, the PLC program is as complicated as a microcontroller program. A microcontroller based solution may be more customisable, and of lower price. microcontroller plc. share | improve this question. edited ...

Both the microcontroller and PLC are quite similar in operation. But the basic difference in microcontroller and PLC is their architecture. the microcontroller on one side has input, output, timers, counters and many other devices developed on the same board, while PLC may have the modular structure.

The MCU vs. MPU question may seem simple, but there are some prominent differences. One of the main differences between microcontrollers and microprocessors is that a microprocessor will typically run an operating system. An operating system allows multiple processes to run at the same time via multiple threads. Drivers are required to support peripherals.

The PLC versus Microcontroller debate has certainly gained more traction in recent years. With the plethora of commercial off the shelf (COTS) single-board computers (SBC's) growing in popularity, functionality and raw power, which one could you, or should you choose for your next automation project?

PLC vs Microcontroller - Difference between PLC and Microcontroller Learning Engineering September 27, 2017. A PLC is basically a gigantic microcontroller. It does the same things a microcontroller can do, but with higher speed, performance, and reliability. A microcontroller is really just a tiny low power CPU or computer with some output registers wired to pins instead of other registers or ...
