

Mitosis Meiosis And Fertilization Answer

Mitosis, Meiosis and Fertilization 1 I. Introduction When you fall and scrape the skin off your hands or knees, how does your body make new skin cells to replace the skin cells that were scraped off? How does each new cell get a complete set of chromosomes? How does a baby get his or her genes? To answer these questions, we need to begin by reviewing what chromosomes and genes are. Chromosomes ...

The order would be: Meiosis -> sex cells -> fertilization -> zygote -> mitosis Meiosis creates sex cells, called gametes, which combine during fertilization to create a zygote.

What is meiosis and fertilization - answers.com

Almost all the cells in your body were produced by mitosis. The only exception is sperm or eggs which are produced by a different type of cell division called meiosis. During fertilization the sperm and egg unite to form a single cell called the zygote which contains chromosomes from both the sperm and egg.

What happens during meiosis and fertilization? | AnswersDrive

In this hands-on, minds-on activity, students use model chromosomes and answer analysis and discussion questions to learn about the processes of meiosis and fertilization. As they model meiosis and fertilization, students follow the alleles of a human gene from the parents' body cells through gametes to zygotes; thus, students learn how a person inherits one copy of each gene from each of his ...

Best Answer: After fertilization, mitosis occurs because growth begins. Meiosis occurs to make the eggs and sperm for fertilization to occur later in life. Meiosis happens before fertilization.

Does mitosis or meiosis occur immediately after fertilization?

Whereas somatic cells undergo mitosis to proliferate, the germ cells undergo meiosis to produce haploid gametes (the sperm and the egg). The development of a new progeny organism is then initiated by the fusion of these gametes at fertilization.

What is the difference between fertilisation and meiosis? Update ... The result of meiosis is more gametes. Fertilization is when the sperm cell breaks the membrane of the ovum and dissolves within the ovum causing both cells 23 chromosomes that each possesses on their own to combine and form 46 total or 23 pairs. The result of fertilization is that you form a blastocyst, and then later on an ...
